**AltMOC to AMC2 145.A.200(a)(6) Management  
system COMPLIANCE MONITORING – INDEPENDENT  
AUDIT**

(f) Except as specified otherwise in point (h), the independent audit should sample check one **Product while being performed for each repair technique**, every year as a demonstration of compliance with the maintenance procedures and **requirements associated with that specific repair technique**. This should include in particular the verification of:

- the maintenance data and compliance with the organisation procedures, including consideration of human factors issues;
- the facility and maintenance environment;
- the standard of inspection and precautions;
- the completion of work cards/worksheet;
- the tools and material;
- the authorisation of the person carrying out maintenance.

**For the purpose of this AltMOC, a repair technique includes any technique as specified in the limitations in the terms of approval and scope of work section of the approved maintenance organisation exposition issued to the particular organisation.**

It therefore follows, for example, that a Part-145 maintenance organisation **approved to perform composite repairs, would need to ensure that each different composite repair technique (including cure technique) is audited each year**, except as specified otherwise in points (f), (h) or (j).
